

(Ship2way) software

Comment 5-25-2021

We need a similar software like Shipstation.com. The software will be call ship2way.com. I need website to be able to in integrate API to shopping portal like Amazon, Ebay, Lazada, Shopee an also integrated to shipping carrier like UPS, FEDEX, DHL, Kerry, USPS, Thai post and integrated to credit card and bank. Need to be web-base software and mobile app. The site need to be user friendly and nice layout and easy to navigate.

You will need to create one simple website like shipstation.com for client able to pay for subscription and learn about our service.

The software need to be written on Python and able to use on web mobile.

Following feature:

- The feature of this software is to be able to do shipping invoice, packing list, Scan barcode and QR code, Inventory, Simple accounting, Product editing, and be able to upload product description to other shopping portal like Amazon, Ebay, Lazada, Shopeee and etc at the same time. It's important that once shopping portal received an order it able to integrated back to ship2way software via CVS excel sheet, so user don't need to key in order from shopping portal.
- Once shipment ship then ship2way and customer will receive notification on the shipping process either it had been process, ship, delivery, complete
- Customer, online shopping, and seller able to receive notification if the shipment had been ship or delivery to customer cell phone via SMS
- Tracking – User able to track on shipment if it had been deliver in real time. If it delivery then it will have notified shopping portal like lazada that shipment had been delivery, process, or ship.
- Choose shipping carrier – user able to choose shipping carrier and notified shipping carrier if the shipment is available for pickup or drop-off. Once user scan the shipment then it will tell the customer, shopping portal, shipping carrier that goods is on shipping process stage
- If customer need a return label. Ship2way able to provide shipping label for customer to print which it connect to shipping carrier. Once label is printed and user or shipping carrier scan it will automatically show up on ship2way and sent information to website, shipping portal and customers
- Report - user able to check on analytic report on both graph and number. Need report in revenue, returns, Sales per day, week, month, year, debit & credit, sku report,
- Marketing Panel – admin is able to manage marketing by sent out customer cell phone, name, and edit and design template. It able to take customer name and sent out advertising picture

and etc to customer via cellphone

- Inventory – Just in time management. User able to set inventory ratio of when to start ordering goods. There should be a red light warning admin to start to check on inventory
- User able to use via mobile app and mobile app able to use air print to print out document from their cell phone
- There should be a subscription feature that user can pay via monthly or yearly. If not pay then software will not work. It needs to have trial period with credit card holding. Once pass 3 month the subscription will automatically charge monthly. Need activation and deactivation feature and able to generate license number to activate.
- There should be option that user can import data from shopping portal to their own ship2way software automatically
- There should be order notification that receive from online store
- There should be marketing module that ship2way can send out free trial period via lines, Facebook, messenger and etc.
- Need payment gateway integration. It needs to integrate mobile banking, credit card and cash on delivery
- Need to be able to retrieve product from dropship supplier like aliexpress, CJ express and upload to shopping portal like bizconnect, Amazon, Lazada and etc.
- Need to be able to signup via cellphone number with OTP.
- Need to be open in Mobile app like ios and android
- There should be database panel and desktop panel admin and web service install
- Need remote access button, so we able to go in to client computer to install software.
- CRM – Need customer relation software feature, so when talk to client it can enter in message and communicate with client
- Able to integrate with any accounting software like quickbook, peachtree and etc.
- User able to backup their data to their own desktop, but default it will be backup to admin server.
- There able to upgrade version to each individual user or all user.
- Live support chat
- Shipping and packing able to connect to both barcode machine and mobile to scan for product

sku and ship.

- Able to upload product description to any online shopping portal via API
- Able to import product description from one site in to ship2way then export the same product description to other online shopping website via API
